SUMMARY

Power Platform Developer and Solution Architect with over 8 years of experience delivering scalable digital solutions across the US and LATAM markets. Specialized in Microsoft Power Platform (Power Apps, Power Automate, Power BI), with strong expertise in system integrations, RPA, and end-to-end solution architecture. Proven track record leading technical teams and driving automation initiatives that enhance operational efficiency and business performance.

Experienced in providing production support for enterprise Microsoft Power Platform environments, including incident troubleshooting, root cause analysis, issue resolution, environment monitoring, authentication troubleshooting, connector configuration, and platform governance. Strong understanding of Application Lifecycle Management (ALM), Azure DevOps, production deployments, and enterprise support processes within ITSM environments.

TECHNICAL SUMMARY

Programming Languages: Python, JavaScript, C#, .NET, PHP, HTML, CSS, VBA.

API Testing: Postman, Microsoft Graph

Automation: UiPath, Automation Anywhere, Power Platform

Process Design: Miro, Visio, Bizagi Studio

Project Management: Jira, Monday, MS Teams, MS Project, Trello

Design: Figma, Adobe XD

Databases: SQL, Oracle, Dataverse, Azure SQL Database, MySQL.

Power Platform Admin Center, Environment Management, Tenant Administration, Security Roles, Managed Solutions, Solution Lifecycle

EXPERIENCE

Astra AI Consulting (March 2026 - May 2026)

Copilot Engineer

- Developed and maintained enterprise solutions using the Microsoft Power Platform, including Power Apps, Power Automate, and Copilot Studio.
- Created and maintained real-time analytical dashboards and reports using Power BI, enabling data-driven decision-making for business leaders.
- Designed, configured, and optimized conversational AI agents to automate business processes and improve user experience.
- Integrated solutions with Microsoft Graph, SharePoint, and other Microsoft 365 services to optimize data access and process automation.
- Designed and implemented AI agent workflows and integrations to improve operational efficiency and user interaction.
- Applied instant messaging engineering techniques and conversational design best practices to enhance the performance and response quality of AI agents.
- Collaborated with cross-functional teams to gather requirements, analyze business needs, and deliver scalable digital solutions.
- Performed data analysis, problem-solving, and process optimization using a structured approach.

- Ensured the quality, reliability, and compliance of solutions through testing, documentation, and continuous improvement initiatives.
- Provided guidance and technical support to stakeholders, prioritizing accuracy, usability, and business value.
- Provided technical support for enterprise Copilot and Power Platform solutions in production environments.
- Investigated user-reported issues, analyzed logs, and resolved integration problems.
- Supported production monitoring and continuous improvement initiatives.

INDRA GROUP (November 2025 – May 2026)

Senior Power Platform Analyst (Long Term)

- Designed, developed, and maintained Canvas Apps, Model-Driven Apps, and Power Pages solutions using Microsoft Power Platform.
- Managed Dataverse tables, relationships, business rules, and data models, as well as integrations with external data sources and connectors.
- Developed interactive dashboards, reports, and data visualizations with Power BI to support business intelligence and decision-making.
- Configured and deployed conversational AI solutions and virtual assistants with Power Virtual Agents and Copilot Studio.
- Managed Power Platform environments, including security roles, permissions, governance policies, and environment management.
- Integrated Power Platform solutions with Dataverse, Azure, SQL Server, SharePoint, REST APIs, and third-party enterprise systems.
- Managed and monitored environments through the Power Platform admin center, ensuring platform stability, compliance, and performance.
- Designed and implemented automated business processes with Power Automate, including complex workflows and system integrations.
- Developed custom connectors and reusable components to extend Power Platform capabilities and facilitate enterprise integrations.
- Developed and customized solutions using C#, JavaScript, and HTML to enhance functionality and meet specific business requirements.
- Collaborated with business stakeholders to gather requirements, design scalable solutions, and optimize operational processes.
- Applied best practices in solution architecture, governance, security, and application lifecycle management (ALM) to Power Platform projects.
- Provided production support for enterprise Power Platform solutions, ensuring high availability and platform stability.
- Investigated and resolved production incidents involving Power Apps, Power Automate, Power Pages, Dataverse, and Power BI.
- Performed root cause analysis (RCA) for recurring issues and implemented preventive solutions.
- Troubleshoot authentication, permission, and connector-related issues across Microsoft 365 and Azure environments.
- Managed production deployments through Azure DevOps following ALM best practices.
- Supported enterprise users by diagnosing application issues, resolving incidents, and providing technical guidance.
- Collaborated with cross-functional support teams to prioritize incidents and ensure SLA compliance.
- Monitored Power Platform environments, identifying performance bottlenecks and proactively resolving issues.
- Managed connection references, environment variables, security roles, and solution dependencies.
- Supported governance initiatives including environment management, DLP policies, and platform administration.

SGS (October 2025 – March 2026)

Power Platform Developer (Short Term)

- Designed and developed a staff scheduling management application using Power Apps and Dataverse.
- Led requirements gathering sessions with business users, translating needs into functional solutions.
- Designed and developed interactive dashboards to support data-driven decision-making.
- Implemented automated notification workflows using Power Automate, including customized emails built with HTML/CSS.
- Developed chatbots using Copilot Studio to enhance user interaction and process automation.
- Managed solution deployments across environments (Development, Testing, and Production) following ALM best practices.
- Built data models using relationships, calculated columns, and DAX measures.
- Collaborated with stakeholders to optimize processes and improve user experience.
- Supported production deployments across Development, UAT, and Production environments.
- Monitored application health and resolved incidents affecting production users.
- Investigated workflow failures and implemented corrective actions to minimize downtime.

Remarkable Project: Reduced manual effort in shift coordination by **60%** through an automated solution, decreasing notification times from hours to real-time and achieving over **85% user adoption**

SOLGAS (September 2024 – September 2025)

Senior Power Platform Specialist (Long Term)

- Designed, developed, and implemented solutions using Microsoft Power Platform (Power Apps, Power Automate, Power Fabric, Power BI, SQL, and Dataverse).
- Participated in the definition and documentation of business requirements.
- Led the Power Platform Center of Excellence (CoE), providing training and support to business users for new and existing applications.
- Managed the complete solution lifecycle, including updates, enhancements, and application customization.
- Developed workflows in Power Automate and RPA Desktop to support Power Apps applications.
- Created project schedules and responsibility matrices for various initiatives in the portfolio.
- Was responsible for the UI design of Power Apps solutions (Canvas and Model-Driven), using Figma and Adobe XD.
- Built data models using relationships, calculated columns, and DAX measures.
- Documented improvements, developments, and project deliverables.
- Administered and oversaw company-wide Power Platform solutions.
- Improved performance and ensured stability of Power Platform solutions.
- Supported production Power Platform applications used across multiple business units.
- Diagnosed and resolved application failures, workflow issues, and connector failures.
- Performed production monitoring and maintenance activities to ensure platform reliability.
- Assisted business users by troubleshooting production issues and resolving support requests.

Remarkable Project: Seal code scanning for gas cylinders using a Canvas App connected to the company's web platform for customer data capture and commercial promotion assignment.

The solution achieved a **43% reduction in SLA time** and a **15% improvement in user experience (NPS)**.

FRACTAL TI (October 2023 – September 2024)

Senior Power Platform Functional Analyst (Project)

- Led a developer's team to deliver modules deliverables on time, also presenting the project progress to stakeholders.
- Contributed the basis for solutions by proposing power platform architecture including best practices.
- Optimized report performance and improved data visualization for business users.
- Created Model Driven and Canvas App by using Power Apps integrated with flows and bots from Power Automate to consume APIs from Microsoft Graph, to save data into SQL tables and finally transform this data into a Power BI Dashboard to generate insights for the decision makers.
- In charge of manage general settings for citizen developers by using Power Platform center, as well as creating pipelines for CI/CD with Azure DevOps to enhance and automate deployment process of solutions.
- Captured user requirements and transform them by using Visio/Bizagi to clarify the process and Figma to prototype the solution into a functional document which is input for developers.
- Designed and executed the unit tests of the implemented developments to ensure the quality of the deliverable and minimize development errors.
- Managed Azure DevOps pipelines and release processes for production environments.
- Supported application lifecycle management (ALM) including deployments, version control, rollback strategies, and release validation.
- Investigated production issues following deployments and coordinated fixes with development teams.

Remarkable Project: Project named Web Bravo, I used Power Pages; to implement a web for important announcements for workers, this web is used to send public congratulations to the outstanding workers.

CSTI Corp (June 2023 – August 2023)

Power Platform Specialist (Project)

- Created an app in Power Apps that works just like Uber, but instead of take a taxi It schedules a tutor to get some help with subjects at university. This app is connected to a flow in automate and this flow uses an API from MS Graph to schedule a tutor in MS Bookings calendar and send notification through both Outlook and WhatsApp.
Into each notification sent the student a link to a MS Teams is attached in order to make easier for both tutor and student meet.
In addition, I built a flow in automate to send notifications to remember the student about the coming meeting

ADDC PERU (January 2023 – December 2024)

Power Platform Instructor (Part-time)

- Help people create apps on their own by using tools such as Power Apps, Power Automate, Power BI & SharePoint.
- Create new material for classes and update the old documentation as well as mentor students as they require.

Remarkable Project: Creation of a Power Apps Application connected to SharePoint which works as a system to sell electronic products, this app is develop by the students step by step during the course.

ACJ SOLUTIONS (June 2022 – April 2023)

Senior Power Platform Functional Analyst (Short-term)

- Led a developer's team to deliver modules deliverables on time, also presenting the project progress to stakeholders.
- Contributed the basis for solutions by proposing power platform architecture including best practices.

- Involved in developing of canvas and model-driven apps as well as creating workflows in automate.
- Captured user requirements and transform them by using Visio/Bizagi to clarify the process and Figma to prototype the solution into a functional document which is input for developers.
- Designed and executed the unit tests of the implemented developments to ensure the quality of the deliverable and minimize development errors.
- Integrated multiple data sources (SQL, Excel, APIs, Dataverse)

Remarkable Project: App developed in Power Apps; Power Automate and Lists in SharePoint Online to capture data from Project and generate indicators to show on a Power BI Dashboard. This App uses APIs from Microsoft Graph to capture data from workers and schedule them meetings all of this from the app.

IZIPAY (January 2022 - April 2022)

Process Management Analyst (Short-term)

- Analyzed and evaluated current processes, identifying alternative process design options and making recommendations for change and improvement, based on various frameworks.
- Elaborated the AS-IS and TO-BE models according to the established methodology, present it to the users and update them after the corresponding feedback.
- Used of low code tools such as Power Apps and Power Automate for the automation of business processes through the development of web and mobile applications that improve their performance.

Remarkable Project: Implementation of a bot in RPA Automate Desktop, which main functionality is to generate and send purchase bills in PDF format to the customer mails, this bot is able to run SQL store procedures and capture txt files to generate all data related to a customer.

TAWA (June 2021 - August 2021)

Process Automation Analyst (Short-term)

- Analyzed, designed and implemented of RPA bots in UiPath for the automation of reports and the generation of a control panel in Power BI with real-time data.
- Automated Excel report generation in VBA for Applications using pivot tables and Power Pivot for automatic sending of the same by Outlook.
- Generated of batcher files to fire unattended bots in UiPath with the task scheduler to improve the efficiency of daily reports that serve as inputs for decision-making.

Remarkable Project: Development of a Canvas Power Apps Application connected to SQL to register the entrance time of workers, including a development of a bot by using RPA Automate desktop to generate payments bills in PDF, these bills capture the debt information of the clients.

BANCO PICHINCHA

(November 2019 - May 2021)

Process Automation Analyst (Long-term)

- Responsible for the survey, analysis and improvement of processes using survey methodology and process modeling, as well as the administrative steps involved; these projects are related to the sale of the bank's products, both liabilities and assets, using the SCRUM/KANBAN methodology using the Trello platform.
- Participated in digital transformation projects such as the document digitization project and digital signature of the Bank for the sale of its most demanded products in the agencies; related project such as the digital signature of entry documents of new collaborators and the updating of external customer data through a landing page to capture contact data.

- Applied of Design Thinking to obtain new digital products of the organization, actively participating in each of the stages with the stakeholders and promoting an environment collaboration of disruption with a view to improving the processes of the personal banking area.
- Applied of UX tools (Journey Maps, Customer Journey, Wireframes, etc.) for the identification of improvement points and the elaboration of customer profiles, as well as the development of solutions that alleviate said pains in the organization using FIGMA.

Remarkable Project: Development of a Canvas Power Apps Application connected to Dataverse to sign digital documents considering approval levels in a workflow in power automate, this app became the principal system in order to get rid of papers and brings around 100K USD in savings (storage and purchase of paper)

BANCO DE CREDITO DEL PERU (May 2019 - July 2019)

Transformation and Support Assistant (Short-term)

- Developed and maintained of applications in .NET, C# and VBA, to meet the new requirements of users in terms of efficiency in their accounting and financial operations, all using SCRUM.
- Supported in the application of Design Thinking to obtain new digital products of the organization, coordinating with stakeholders for the generation of MVP's and pilot tests.
- Executed of queries and automation of their reporting for batch processes carried out periodically, from which performance indicators of the bank's staff are obtained; the data generated is updated in the KPI tables in SQL.

Remarkable Project: Implementation of SharePoint forms to organize customer selling data in several shared folders and visualize the data in order to ensure the improvement process and developed of ETL for loading staff performance information per week using Microsoft Integration Services in Visual Studio.

INTERBANK (May 2018 - December 2018)

Software Engineer (Internship)

- Supported in the development of a Dashboard in SAP using SCRUM to monitor sales in stores at the level of Metropolitan Lima.
- Implemented a Dashboard in PHP and MySQL for real-time monitoring of expenses in the bank's stores with the important purpose of mapping irregular expenses that deserve to be sanctioned, thus preventing the company from being harmed.
- Developed VBA Apps connected to SQL as well as participated in RPA development of projects.

Remarkable Project: Generation of KPI Dashboard and management and production indicators using POWER BI and TABLEAU for the generation of customer knowledge / profiles.

MARINDOS

(January 2018 - December 2018)

Power Apps Developer (Long-term)

- Designed and implemented of the company's administration website developed in Power Pages (Power Portals) to manage firefighting products sales.
- Maintained old canvas apps to update them with new functionalities and get them up and running

Remarkable Project: Creation of a Power Apps Application connected to MS Project and SharePoint in order to monitor project deadlines and ensure delivering on time, including Implementation of a Power BI Dashboard to visualize performance indicators and Projects progress.

EDUCATION

European Graduate Institute, Lima, Peru

Master in Business Administration (2022-2024).

University of Piura, Piura, Peru

Specialist in Improvement and Management of Processes (2022).

National University of Engineering, Lima, Peru

Bachelor Degree in Systems Engineering (2012 - 2018).
